SUMMARY

Product Designer with 5+ years of experience taking web and mobile products from 0 to 1. As the sole designer at WorkReactor, owned research, UX, UI, and the design system for a live SaaS platform through several product pivots. Now focused on SmartBoo, my own AI app, from owner research to clear decisions, flows, and edge cases, while learning design engineering by building its iOS prototype with Claude Code.

EXPERIENCE

Product Designer → Design Engineer | SmartBoo (personal project) | Bay Area, CA **2026–Present**

- Own SmartBoo end to end, from research and product strategy to UX, UI, and the design system: an AI assistant that files vet papers and voice notes into each pet's records.
- Led mixed-methods research to define the MVP: an owner survey (~50 responses), 5 owner interviews (ongoing), and ~2,900 App Store reviews across ~40 competing pet apps.
- Pivoted the concept from a daily voice diary to paper-first capture after research showed most owners touch pet records only a few times a year.
- Defined trust rules for the AI: it asks instead of guessing between pets, saves low-stakes logs with Undo, and sends meds, vaccines, and symptoms through a review card.
- Learning design engineering by building the iOS prototype with Claude Code from Figma Variables tokens; set an activation goal of 60% of new users saving a first record in session one. TestFlight demo on December 2.

Product Designer | Independent | Bay Area, CA **2024–Present**

- Provide product design and UX support for Unit Post, a messaging and outreach platform, and SET.DO, an AI-powered calendar and task-planning app.
- Design responsive websites and digital experiences across a variety of independent projects.
- Designed and built hanna.vision, a responsive portfolio website using Next.js and AI-assisted development.

Product Designer | WorkReactor | San Francisco, CA **2021–2024**

- Sole designer on a SaaS platform combining professional networking, startup collaboration, and project management, owning research, UX, UI, and developer handoff.
- Led user research and continuous iteration on a live product with early users, adapting the experience through several shifts in product direction.
- Designed 100+ high-fidelity screens, from user flows and prototypes for profiles, networking, projects, tasks, and milestones to production-ready UI.
- Built and maintained the design system: reusable components, UI patterns, and visual standards shared with engineering.
- Partnered with the founder and engineers on product decisions, feature planning, and design reviews.
- Led a 2024 redesign based on 32 interviews with founders, engineers, and investors; the company closed before launch.

UI/UX Designer | ArtLife Studio | Kyiv, Ukraine **2019–2021**

- Designed web and mobile interfaces for client projects, focusing on clarity, usability, and consistent UI patterns.
- Presented concepts to clients and iterated with designers and developers based on feedback.

SKILLS

Design: Product design, UX research, usability testing, user flows, information architecture, wireframing, prototyping, interaction design, design systems, developer handoff

Tools: Figma, Adobe Creative Suite, Claude Code, Next.js, React, AI-assisted development

EDUCATION

B.S. in Mathematics — National Pedagogical Dragomanov University

Mobile App Design — Projector Institute (2023)

UI/UX Design — DAN.IT (2019)
